HADJER MEGOURA

Software Engineer | Full-Stack Developer (Angular, Spring Boot, PostgreSQL)

Sétif, Algeria | (+213) 0558269399 | megourahadjer@gmail.com | linkedin.com/in/hadjer-megoura | github.com/HadjerMegoura

PROFESSIONAL SUMMARY

Software Engineer with production experience across the full stack, currently specializing in Angular front-end development while actively expanding into backend engineering with Spring Boot, Spring Security, and PostgreSQL. Adept at managing the full application lifecycle — from pixel-perfect UI development to backend logic, database design, and API debugging. Proven track record of being trusted with front-end ownership and architectural decisions early, and of delivering production software used by enterprise clients.

SKILLS

Frontend & Web: Angular (v16-18, Standalone, NgRx), TypeScript, JavaScript, HTML5, CSS3, Tailwind CSS, Responsive Design, Figma Dev Mode

Backend & APIs: Spring Boot (Java), Spring Security, OAuth 2.0, JWT, REST APIs, Delphi 10, Django (Python)

Databases: PostgreSQL, SQL Server, SQLite, MongoDB

Tools & Methodologies: Git, Postman, Agile (Scrum/Kanban), Storybook

Languages: English (Professional), French (Professional), Arabic (Native)

WORK EXPERIENCE

Software Engineer — Angular Front-End & API Integration

Wissal Systems Algérie | Sétif, Algeria • 03/2025 – Present

- **Front-end ownership:** Acted as the primary front-end contributor on a large-scale, production-grade enterprise Angular application, ensuring consistency, quality, and timely delivery across releases.
- **Access control system:** Designed and implemented a generic, role-based permission and access-control system on the front-end, enabling flexible, maintainable management of user access across application features.
- **Backend API debugging:** Expanded technical scope by diagnosing and resolving issues in the application's backend REST APIs, supporting faster cross-layer bug resolution alongside back-end developers.
- **State management:** Implemented and maintained NgRx Store to centralize application state across complex, data-heavy views.
- **API integration:** Consumed and optimized REST APIs, handling pagination, filtering, and data transformation for large datasets.
- **Security:** Contributed to secure authentication flows using HttpOnly cookies, working closely with backend developers on session handling.
- **Modernization:** Led Angular version upgrades (v16 → v18), resolving dependency conflicts and adapting legacy code for compatibility.
- **Reusable architecture:** Built reusable components and contributed to a shared Angular component library with a custom design theme.
- **UI development:** Delivered responsive interfaces using Angular and Tailwind CSS, closely aligned with Figma designs.
- **Testing & documentation:** Used Storybook to validate and document reusable components for cross-team use.
- **Cross-functional collaboration:** Worked daily with QA testers, product owners, and backend developers in an Agile environment to align on requirements and ensure smooth releases.

Front-End Web Developer (Freelance)

Yim Media (Client: Tutoria Cergy) | Remote / Paris, France • 01/2026 – 06/2026

- **UI/UX implementation:** Developed responsive, pixel-perfect landing pages for an educational digital platform, translating Figma Dev Mode specifications directly into production Angular code.
- **Reusable components:** Built modular, reusable Angular components using Tailwind CSS, ensuring visual and functional consistency across multiple landing pages.
- **Animation & interaction:** Implemented animated UI elements to enhance user engagement while maintaining performance across devices.
- **Cross-platform optimization:** Ensured responsive behavior and consistent rendering across mobile and desktop, with attention to load performance.

- **Client collaboration:** Worked directly with the client to translate design and content requirements into functional, production-ready front-end deliverables.

Software Engineer — Full-Stack Developer (Delphi / SQL)

BMSoft | Sétif, Algeria • 01/2024 – 08/2024

- **Full-stack ownership:** Contributed to large-scale, production-grade enterprise applications used by multiple French client companies, delivering features end-to-end from database schema to front-end UI.
- **Backend & business logic:** Designed and implemented core backend logic using Delphi 10, handling complex business rules for enterprise clients in active production use.
- **Database engineering:** Wrote and maintained SQL Server queries to support high-volume data operations across client-facing modules.
- **Legacy system reliability:** Maintained and extended a complex, business-critical Delphi codebase, ensuring new functionality didn't disrupt existing client operations.
- **Cross-functional collaboration:** Worked directly with QA testers and fellow developers to validate features, reproduce and resolve bugs, and ensure stable releases for production clients.
- **Front-end contributions:** Built and improved interactive UI components using JavaScript and jQuery to support day-to-day client workflows.

PROJECTS

Full-Stack Authentication & Security System

Tech: Angular, Spring Boot, Spring Security, PostgreSQL, OAuth 2.0, JWT

- Designed and built a complete authentication system, evolving from a standard JWT setup to HttpOnly cookies to protect against XSS attacks.
- Added refresh token logic to support secure, persistent sessions without exposing tokens to client-side JavaScript.
- Integrated OAuth 2.0 for third-party authentication alongside the core credential-based flow.
- Built a protected /me endpoint to securely expose authenticated user data, with centralized exception handling across the API.
- Developed the Angular front-end to consume secured endpoints and manage authenticated state, backed by a PostgreSQL database.

Project Management System (Personal Project)

Tech: Spring Boot, Java, PostgreSQL, REST APIs

- Designed and built a complete relational database schema to handle system configurations, workspace creation, and user task allocation.
- Implemented standardized RESTful APIs using correct HTTP methods, data validation, and relational mapping to manage backend data transformations.

Academic Project Management Application

01/2022 – 06/2022

Tech: Spring Boot, AngularJS, SQL Server, REST APIs

- Designed a decoupled microservices architecture for an academic platform, developing the core backend layers in Spring Boot and implementing full front-to-back integration.

EDUCATION

Master's Degree in Software Engineering (Information Systems)

École Supérieure en Informatique 08 Mai 1945, Sidi Bel Abbès | 2021 – 2023

Engineering Degree in Computer Science

École Supérieure en Informatique 08 Mai 1945, Sidi Bel Abbès | 2018 – 2023
